March 2014 | Volume 1, Issue 1

Dual Pilot Relay (Model 16D2)

The Ruelco Dual Pilot Relay is a universal relay operated by two pilot supply pressures. The flow through the valve shifts upon application of a control pressure to a Pilot Supply port, and will remain in that position until a signal is seen on the opposite Pilot Supply port. The relay will also operate with the application of an adequate pressure differential between the two pilot caps.

- 316 stainless steel construction (models to N.A.C.E. MR0175 available).
- Supply and pilot pressures are independent of each other.
- Large Cv factor assures fast system response.
- Viton seals are utilized for dependability.
- Relay position is held until it sees a pilot signal on the opposing cap.
- Will shift and hold open/closed with a temporary pilot signal

Ruelco is Pleased to Announce Our New Quality Control Area

As expressed in Ruelco's mission statement, providing our customers with high quality products is our top priority. To maintain our mission statement, Ruelco has revitalized our Quality Control Department and Quality Assurance Program to continue to provide customers with top notch products and service. These changes have opened the door to many new opportunities and improved processes, pushing quality to the forefront of Ruelco production.

The expansion and overhaul of the Quality Control Department ensure that day-to-day operations flow efficiently and that our QC team works to the best of their ability. Ample workstation space, queuing areas for work-in-process, added storage and new computer tracking software are just a few of the newly added amenities. Digital precision instruments provide ease of use and increased accuracy when measuring parts, and our optical zoom camera provides our team with added visual inspection capabilities.

Ruelco's Quality Assurance Program features a new sampling plan in addition to other activities which ensure that quality levels of products and services are maintained. These new techniques and procedures take a fresh approach to Quality Control beyond solely inspecting parts, and by integrating them into everyday processes and procedures.

All of these changes comprise Ruelco's new Quality Control Department and Quality Assurance Program, and are critical to Ruelco's core values. Ruelco will continue to adapt and improve processes in the pursuit of remaining industry leaders in quality and customer satisfaction.
