SS-2 Model 4202/4222 Pressure Switch

The Ruelco SS-2 pressure switch is a three way block and bleed valve that is operated by pressure acting on a piston opposing an adjustable spring force. It functions as either a normally closed or normally open valve, depending on through which of the two ports the instrument pressure is supplied. The output port is the same for either mode of operation. Pressure applied to the sense port will cause the valve to operate.

- 316 stainless steel construction (models to N.A.C.E. MR0175 available).
- Standard base range 10-10,000 PSI (with 1/4" piston option).
- Operating pressure range from 0.5 to 20,000 PSI.
- Capable of handling hydraulic instrument pressure (model 4222 only).
- Block and bleed 3-way valve.
- Holds constant and accurate set points.
- Designed for 1% plus or minus repeatability on set points.
- Minimum deadband between trip and reset pressure.
- Spring may be replaced with instrument and sensing pressure present in the sensor.
- Vent above sensing piston prevents high pressure from entering instrument supply should a piston seal leak develop.
- Optional tamper proof lockout device available.
- Optional indicating scale available (Model 4203/4223).
- ATEX Certified models available.
- SIL 3 capable models available.

RUELCO ANNOUNCES NEW HAMMOND FACILITY

Ruelco is pleased to announce the acquisition of a new 60,000 square foot facility in Hammond, LA. This site will function as a satellite facility to Ruelco's corporate office located in New Orleans, LA. This new facility will allow Ruelco the ability to double its current capacity so that the standard of same day delivery can be maintained despite the continually growing demands of our customer base. The new facility will be fully staffed and operational in the 4th quarter of 2014.
